

One of the most versatile products for cleaning the home and bathrooms in general is **ammonia**. Coycama recommends the use of ammonia mixed with water to correctly clean washbasins with **Kromtek** coating. However, it is important to know how to use it correctly in order to enhance its effects and make the washbasin look shiny quickly and easily.

PREPARATION

Dilute one part ammonia in three parts water (**1:3**) in a spray bottle.

PRECAUTIONS

- Do not mix with other cleaning chemicals.
- Keep children and pets away from the cleaning area.
- Open windows to improve ventilation and evacuate odours and vapours.

HOW TO USE

1. Spray the mixture all over the surface.
2. Leave it to act for a few minutes so that stains are easier to remove.
3. Use a soft damp cloth to wipe the entire surface until the stains are removed.
4. Dry the washbasin using a dry cotton cloth.
